

**Introductio**

The VS203 system is the highly accurate and cost-effective machine health monitoring system. It assembles several vibration sensors with built-in intelligent computing functions, which can actively sense the health status of equipment, and transmit the computing results to the field control system via open transmission protocols.

It is a RS485, triaxial (X, Y and Z), high-bandwidth, smart vibration sensor, which can instantly diagnose the health status of machine.

The built-in time domain data cleaning functions can handle the monitoring and diagnosis of variable frequency rotating machine and non-rotary equipment easily.

**Application**

Providing status monitoring functions of components in high-speed rotating machine, motor, gearbox and non-rotary type equipment, such as robot and linear guide.
